### A Stock Pattern Recognition Algorithm

A Stock Pattern Recognition Algorithm Based on Neural Networks. Abstract:Recent studies show that stock patterns might implicate useful information for stock price forecasting. The patterns underlying the price time series can not be discovered exhaustively by the pure man power in a limited time, thus the computer algorithm for stock price pattern recognition becomes more and more popular.

DTW allows us to recognize a pattern that could vary in size and length. To use this algorithm, we must use reference time series, which have to be selected by a human. The references must generalize well when compared with signals similar to the pattern in order to capture the whole range.

### Stock Chart Pattern recognition with Deep Learning

I recently wrote an algorithm that uses an extremely dumb method to detect horizontal support and resistance levels within a short (90 minute) window, which confirmed that this is a very reliable signal when used with medium-volatility, low-volume stocks (penny stocks). Encouraged by those results, I tried to build on the concept with a new script that on the fly keeps track of multiple levels
